

CAMP WAIPU COVE

GO GREEN

Camp Waipu Cove is an eco-friendly campground. Our goal is to lessen the impact on climate change and promote environmental sustainability. Here are a few little things we've done to help make our planet a better place.

110 solar panels on our facilities buildings

We installed solar panels in 2017, since then we've saved 26.5% of total power bill per year. We also have sensor lights in all toilets and shower facilities, lights will automatically turn off when not in use.

We've reduced carbon usage by using electric vehicles (golf buggy's) for staff to move around the camp.

We support our local community by sponsoring the Waipu Cycleway. The goal is to have a full 9 km trail from Waipu Township to Waipu Cove with an exciting trail ride for cyclists and walkers. For more information, please visit www.waipucycleway.com.

Waipu Cycleway. Stage 1 & 2 are completed. Stage 3 is currently in process (as at July 2020)

Camp buggy

Before

After

Our dunes are really important to our community. It helps as natural defences against coastal hazards and erosion, while maintaining and enhancing the recreational opportunities of animal habitats. In 2017, Camp Waipu Cove was named the winner of 'New Zealand's Best Coastal Dune Restoration Project' by the Coastal Restoration Trust of New Zealand.

We reduced plastic by replacing the products in our cabins to paper-made and removed bin liner.

Our organic veggie garden produces a variety of vegetables such as parsley, thymes, spinach, lettuce, kale and more, available for guests and staff at reception.

You can do your bits to help us by....

Turn off lights and heating when you are the last to leave room.

Turn off water taps when brushing your teeth.

Avoid walking on sand dunes and use accessways provided.

Dispose of your rubbish correctly .

Thank you in advance for helping us protect the environment ☺
